To ensure you have the latest revision of the Operating Manual, or to view the Illustrated Parts Catalog, Programming Manual, or Service Manual, please visit the Bunn-O-Matic website, at www.bunn.com. This is absolutely FREE, and the quickest way to obtain the latest catalog and manual updates. For Technical Service, contact Bunn-O-Matic Corporation at 1-800-286-6070.

BUNN-O-MATIC COMMERCIAL PRODUCT WARRANTY

Bunn-O-Matic Corp. ("BUNN") warrants equipment manufactured by it as follows:

- 1) Airpots, thermal carafes, decanters, GPR servers, iced tea/coffee dispensers, MCR/MCP/MCA single cup brewers, thermal servers and ThermoFresh® servers (mechanical and digital) 1 year parts and 1 year labor.
- 2) All other equipment - 2 years parts and 1 year labor plus added warranties as specified below:
 - a) Electronic circuit and/or control boards - parts and labor for 3 years.
 - b) Compressors on refrigeration equipment - 5 years parts and 1 year labor.
 - c) Grinding burrs on coffee grinding equipment to grind coffee to meet original factory screen sieve analysis - parts and labor for 4 years or 40,000 pounds of coffee, whichever comes first.

These warranty periods run from the date of installation BUNN warrants that the equipment manufactured by it will be commercially free of defects in material and workmanship existing at the time of manufacture and appearing within the applicable warranty period. This warranty does not apply to any equipment, component or part that was not manufactured by BUNN or that, in BUNN's judgment, has been affected by misuse, neglect, alteration, improper installation or operation, improper maintenance or repair, non periodic cleaning and descaling, equipment failures related to poor water quality, damage or casualty. In addition, the warranty does not apply to replacement of items subject to normal use including but not limited to user replaceable parts such as seals and gaskets. This warranty is conditioned on the Buyer 1) giving BUNN prompt notice of

any claim to be made under this warranty by telephone at (217) 529-6601 or by writing to Post Office Box 3227, Springfield, Illinois 62708-3227; 2) if requested by BUNN, shipping the defective equipment prepaid to an authorized BUNN service location; and 3) receiving prior authorization from BUNN that the defective equipment is under warranty.

THE FOREGOING WARRANTY IS EXCLUSIVE AND IS IN LIEU OF ANY OTHER WARRANTY, WRITTEN OR ORAL, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF EITHER MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. The agents, dealers or employees of BUNN are not authorized to make modifications to this warranty or to make additional warranties that are binding on BUNN. Accordingly, statements by such individuals, whether oral or written, do not constitute warranties and should not be relied upon.

If BUNN determines in its sole discretion that the equipment does not conform to the warranty, BUNN, at its exclusive option while the equipment is under warranty, shall either 1) provide at no charge replacement parts and/or labor (during the applicable parts and labor warranty periods specified above) to repair the defective components, provided that this repair is done by a BUNN Authorized Service Representative; or 2) shall replace the equipment or refund the purchase price for the equipment.

THE BUYER'S REMEDY AGAINST BUNN FOR THE BREACH OF ANY OBLIGATION ARISING OUT OF THE SALE OF THIS EQUIPMENT, WHETHER DERIVED FROM WARRANTY OR OTHERWISE, SHALL BE LIMITED, AT BUNN'S SOLE OPTION AS SPECIFIED HEREIN, TO REPAIR, REPLACEMENT OR REFUND.

In no event shall BUNN be liable for any other damage or loss, including, but not limited to, lost profits, lost sales, loss of use of equipment, claims of Buyer's customers, cost of capital, cost of down time, cost of substitute equipment, facilities or services, or any other special, incidental or consequential damages.

INTRODUCTION

ITB

This equipment will brew tea into an awaiting dispenser or reservoir.

The ITB uses recipe settings to brew tea. It has an LCD for digital readout and programming. The user is able to select regular or quick brew for tea programming. Other features include Pre-Infusion and Pulse Brew, quick and standard brew, Energy Savings mode, BUNNLink compatible, Freshness Timer, Sanitation Alert, and brew counters. Available in low profile, dual dilution and sweetener models.

ITCB-DV/ITCB-DV HV

This equipment will brew either tea or coffee into an awaiting dispenser or reservoir. It can be easily configured for 120V or 120/208V-120/240V (Refer to data plate for specific ratings). The brewer may have an auxiliary hot water faucet that can be mounted on the front, left or right side.

ITCB HV TWIN

This equipment will brew either tea or coffee into an awaiting dispenser or reservoir in either the left or right side brewing station. The brewer may have an auxiliary hot water faucet that can be mounted on the front, left or right side.

This equipment is only for indoor use on a sturdy counter or shelf.

The Infusion Series combines BrewWISE, CDBC and Tea Brewers into one. ITCB is able to brew both tea and coffee with recipe settings. It has an LCD for digital readout and programming along with the Smart Funnel options for coffee and tea. The user is able to select regular or quick brew for tea programming. Other features include: Pre-Infusion, Pulse Brew, quick and standard brew, and BrewWISE, Energy Savings mode, BUNNLink compatible, Smart Reader compatible, Freshness Timer, Sanitation Alert, sweetener with low product detection, and USB port for users to save and load recipes or new software onto brewer.

USER NOTICES

Carefully read and follow all notices in this manual and on the equipment. All labels on the equipment should be kept in good condition. Replace any unreadable or damaged labels.

As directed in the International Plumbing Code of the International Code Council and the Food Code Manual of the Food and Drug Administration (FDA), this equipment must be installed with adequate backflow prevention to comply with federal, state and local codes. For models installed outside the U.S.A., you must comply with the applicable Plumbing/Sanitation Code for your area.

CE REQUIREMENTS

- This appliance must be installed in locations where it can be overseen by trained personnel.
- For proper operation, this appliance must be installed where the temperature is between 5°C to 35°C.
- Appliance shall not be tilted more than 10° for safe operation.
- An electrician must provide electrical service as specified in conformance with all local and national codes.
- This appliance must not be cleaned by water jet.
- This appliance can be used by persons aged from 18 years and above if they have been given supervision or instruction concerning use of the appliance in a safe way and if they understand the hazards involved.
- Keep the appliance and its cord out of reach of children aged less than 18 years.
- Appliances can be used by persons 18 years and above with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved.
- Children under the age of 18 years should be supervised to ensure they do not play with the appliance.
- If the power cord is ever damaged, it must be replaced by the manufacturer or authorized service personnel with a special cord available from the manufacturer or its authorized service personnel in order to avoid a hazard.
- Machine must not be immersed for cleaning.
- Cleaning and user maintenance shall not be made by children unless they are older than 18 years and supervised.
- This appliance is intended to be used in household and similar applications such as:
 - staff kitchen areas in shops, offices and other working environments;
 - by clients in hotels, motels and other residential type environments;
 - bed and breakfast type environments.
- This appliance not intended to be used in applications such as:
 - farm houses;
- Access to the service areas permitted by Authorized Service personnel only.
- The A-Weighted sound pressure level is below 70 dBA.

NORTH AMERICAN REQUIREMENTS

- This appliance must be installed in locations where it can be overseen by trained personnel.
- For proper operation, this appliance must be installed where the temperature is between 41°F to 95°F (5°C to 35°C).
- Appliance shall not be tilted more than 10° for safe operation.
- An electrician must provide electrical service as specified in conformance with all local and national codes.
- This appliance must not be cleaned by pressure washer.
- This appliance can be used by persons aged from 18 years and above if they have been given supervision or instruction concerning use of the appliance in a safe way and if they understand the hazards involved.
- Keep the appliance and its cord out of reach of children aged less than 18 years.
- Appliances can be used by persons 18 years and above with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved.
- Children under the age of 18 years should be supervised to ensure they do not play with the appliance.
- If the power cord is ever damaged, it must be replaced by the manufacturer or authorized service personnel with a special cord available from the manufacturer or its authorized service personnel in order to avoid a hazard.
- Machine must not be immersed for cleaning.
- Cleaning and user maintenance shall not be made by children unless they are older than 18 years and supervised.
- This appliance is intended for commercial use in applications such as:
 - staff kitchen areas in shops, offices and other working environments;
 - by clients in hotel and motel lobbies and other similar types of environments;
- Access to the service areas permitted by Authorized Service personnel only.

ELECTRICAL REQUIREMENTS ITB & ITCB-DV

Refer to Data Plate on the Brewer, and local/national electrical codes to determine circuit requirements.

“Optional Field Wiring ratings are located on the machine near the dataplate.”

WARNING - The brewer must be disconnected from the power source until specified.

WARNING - The power cord must be UL Listed, Flexible Cord Type SO, SJO, SJTO, HSJO or SJOW, Rated 90° C, and the attachment plug cap must be UL Listed, in order to avoid a hazard. The Power Supply Cord must be at least 3 feet long and maximum 6 feet long (measured from Strain Relief to end of the Attachment Plug Cap).

ITB - 120V models require 2-wire, grounded service rated 120 volts AC, 15 amp, single phase, 60Hz.

ELECTRICAL HOOK-UP (All Models)

CAUTION – Improper electrical installation will damage electronic components. Damage caused by incorrect electrical connections is not covered by warranty.

1. An electrician must provide electrical service.
2. Determine the available on-site electrical service.
3. (Steps 3 & 9 apply to DV models only) Select the desired unit voltage based on the available on-site electrical service.
4. Using a voltmeter, check the voltage and color coding of each conductor at the electrical source.
5. Remove the back panel to gain access to the terminal block.
6. Feed the power cord through the strain relief and connect it to the terminal block(s).
7. Connect the power cord to the terminal block as shown.
8. Before proceeding, verify the voltage at the field wiring terminal block.
9. Set voltage switch to the appropriate position and replace the access panel.
10. If plumbing is to be hooked up later be sure the brewer is disconnected from the power source. If plumbing has been hooked up, the brewer is ready for Initial Set-Up.

ELECTRICAL REQUIREMENTS ITCB-DV HV & TWIN

Refer to Data Plate on the Brewer, and local/national electrical codes to determine circuit requirements.

“Optional Field Wiring ratings are located on the machine near the dataplate.”

WARNING - The brewer must be disconnected from the power source until specified.

WARNING - The power cord must be UL Listed, Flexible Cord Type SO, SJO, SJTO, HSJO or SJOW, Rated 90° C, and the attachment plug cap must be UL Listed, in order to avoid a hazard. The Power Supply Cord must be at least 3 feet long and maximum 6 feet long (measured from Strain Relief to end of the Attachment Plug Cap).

ITCB HV TWIN - requires 3-wire, grounded service rated 120/208-240 volts AC, 30 amp, single phase, 60Hz.

ITCB-DV HV - 120V models require 2-wire, grounded service rated 120 volts AC, 15 amp, single phase, 60Hz. or 3-wire, grounded service rated 120/208-240 volts AC, 20 amp, single phase, 60Hz.

ELECTRICAL HOOK-UP (All Models)

CAUTION – Improper electrical installation will damage electronic components. Damage caused by incorrect electrical connections is not covered by warranty.

1. An electrician must provide electrical service.
2. Determine the available on-site electrical service.
3. (Steps 3 & 9 apply to DV models only) Select the desired unit voltage based on the available on-site electrical service.
4. Using a voltmeter, check the voltage and color coding of each conductor at the electrical source.
5. Remove the front panel to gain access to the terminal block.
6. Feed the power cord through the strain relief and connect it to the terminal block.
7. Connect the power cord to the terminal block as shown.
8. Before proceeding, verify the voltage at the field wiring terminal block.
9. Set voltage switch to the appropriate position and replace the access panel.
10. If plumbing is to be hooked up later be sure the brewer is disconnected from the power source. If plumbing has been hooked up, the brewer is ready for Initial Set-Up.

PLUMBING REQUIREMENTS

These brewers must be connected to a cold water system with operating pressure between 20 and 90 psi (0.138 and 0.620 mPa) from a 1/2" or larger supply line. A shut-off valve should be installed in the line before the brewer. Install a regulator in the line when pressure is greater than 90 psi (0.620 mPa) to reduce it to 50 psi (0.345 mPa). The water inlet fitting is .75-11.5 NH (HOSE THREAD). For convenience an elbow adaptor is provided to convert to a 1/4" flare fitting (3/8" flare on Twins). Bunn-O-Matic does not recommend the use of a reverse-osmosis or deionized water supply to this equipment. **REQUIRED: 1.25 gpm (4.73 lpm) flow rate from water supply line.**

NOTE - Bunn-O-Matic recommends 3/8" copper tubing for all installations from the 1/2" water supply line. A tight coil of tubing in the water line will facilitate moving the brewer to clean the counter top. Bunn-O-Matic does not recommend the use of a saddle valve to install the brewer. The size and shape of the hole made in the supply line by this type of device may restrict water flow.

As directed in the International Plumbing Code of the International Code Council and the Food Code Manual of the Food and Drug Administration (FDA), this equipment must be installed with adequate backflow prevention to comply with federal, state and local codes. For models installed outside the U.S.A., you must comply with the applicable Plumbing /Sanitation Code for your area.

Plumbing Hook-Up

1. Remove the shipping cap from the fitting on the rear of the brewer.
2. **STANDARD MODELS:** Securely attach adaptor elbow assembly to the .75-11.5 NH (HOSE THREAD) fitting at the rear of the brewer.
TWIN MODELS: Securely attach the tube assembly (supplied in parts box) to water supply line. Securely attach the elbow assembly to the .75-11.5 NH (HOSE THREAD) fittings at the rear of the brewer. Connect the tube assembly to the elbows.
3. Flush the water line and Securely attach it to the adaptor elbow.
4. Turn on the water supply.

OPTIONAL SWEETENER

Connect sweetener line to fitting on back of brewer labeled "SWEETENER".

NOTE: Operating range for sweetener is 25-60psi, 35psi recommended.

OPERATING CONTROLS

ITB, ITCB-DV & HV

ITCB-TWIN HV

A. ENABLE BREW (ON/OFF) SWITCH

Pressing the ENABLE BREW (ON/OFF) switch pad will alternately turn the brewer on and off. Pressing this pad during the brew cycle will interrupt the brew cycle, stopping the flow of water. Pressing this pad during programming of the brewer will exit the setup and return to the main screen.

B. PROGRAMMING (left)

This hidden pad can be used to scroll backwards through the function list while in programming mode.

C. BREW (A,B,C) and FUNCTION

When the ENABLE BREW is ON and the brewer is on the main screen (not in programming mode), momentarily pressing and releasing this pad will begin a brew cycle. These are also used to program the brewer when in the programming mode.

D. PROGRAMMING (right)

Pressing and holding this pad allows entry into the programming menus. Pressing and releasing the pad steps through each function screen while in the programming mode.

E. BATCH SELECTOR PADS

Pressing the pad corresponding to the Half or Full batch selects the amount of product to be brewed. Pressing a different pad after a brew cycle has been initiated does not change the brew batch in progress. Light indicates the selected batch to brew. Also used in programming to adjust settings on both batch sizes.

F. FUNCTION SCREEN

This is the display which shows the various functions of the brewer and allows the programming to be accomplished.

G. FUNNEL SENSING COIL (ITCB ONLY)

This is used to "receive" information from the Smart Funnel handle, recipe cards, and ad cards.

H. FUNCTION SCREEN SWITCHES

Left Dot: This is used to select options (NO/-) that appear on the display during programming.

Center Dot: This is used to select options (DONE) that appear on the display during programming.

Right Dot: This is used to select options (YES/+) that appear on the display during programming.

INITIAL SET-UP

1. Insert an empty funnel into the funnel rails.
2. Place an empty server under the funnel.
3. Connect the brewer to the power source. Make sure the ON/OFF switch is ON (LED will be lit).
4. Water will flow into the tank and stop when the tank is filled to its capacity. Display will show **PLEASE WAIT...TANK FILLING** until tank is filled with water.
5. Wait approximately twenty minutes for the water in the tank to heat to the proper temperature. Display will show **READY TO BREW...WATER TEMP: 205°** when tank is at operating temperature. Some water will drip from the funnel during this time; this is due to expansion and should not occur thereafter.
6. **MODELS w/FAUCET:** Place a small container beneath the faucet and open the faucet handle. Release it when you hear the tank refilling.
7. Water volumes and flow settings have been preset at the factory. Refer to the Programming Manual should the volume need to be increased or decreased.
8. The brewer is now ready for use in accordance with the instructions for Tea Brewing and Coffee Brewing.

Brew water temperature is factory set at 205° F (96.1° C)
Areas of high altitude will require lowering this temperature to prevent boiling. This chart should be used as a guide when readjusting the brew water temperature.

Altitude (Feet)	Boiling point of water		Recommended water temperature	
	° F	° C	° F	° C
-1000	213.8	101.0	200	93.3
-500	212.9	100.5	200	93.3
0	212.0	100.0	200	93.3
500	211.1	99.5	200	93.3
1000	210.2	99.0	200	93.3
1500	209.3	98.5	200	93.3
2000	208.4	98.0	200	93.3
2500	207.4	97.4	200	93.3
3000	206.5	96.9	199	92.8
3500	205.6	96.4	198	92.2
4000	204.7	95.9	197	91.7
4500	203.8	95.4	196	91.1
5000	202.9	94.9	195	90.6
5500	201.9	94.4	195	90.6
6000	201.0	93.9	194	90.0
6500	200.1	93.4	193	89.4
7000	199.2	92.9	192	88.9
7500	198.3	92.4	191	88.3
8000	197.4	91.9	190	87.8
8500	196.5	91.4	189	87.2
9000	195.5	90.8	188	86.7
9500	194.6	90.3	187	86.1
10000	193.7	89.8	186	85.6

VIEWING ASSIGNED RECIPES

1. Make sure the ON/OFF switch is OFF (LED will not be lit).
2. Press and hold BREW A. The display will show the name of the recipe assigned to Brew A along with SWITCH NOT ON. This is to indicate that a brew cannot be initiated while the ON/OFF switch is OFF.
3. Repeat for BREW B and BREW C.
4. (Twins only) Repeat steps 1 -3 for other side.
5. Make sure the "ENABLE BREW ON/OFF" switch is OFF. To view the asset number of the machine, press and hold the left hidden button until the display reads: **ANXXXXXX...ASSET NUMBER**. Release the left hidden button.
6. After a 5 second delay, the display will read: **ITCBXXXXXX**. This is the serial number of the machine.

TEA BREWING

1. Begin each brew cycle with a clean empty brew funnel and server. (Be sure the server lid doesn't interfere with the flow of dilution water.)
2. Insert a BUNN filter into the funnel.
3. Pour the packet of loose fresh tea leaves into the filter. Approximately three to five ounces is recommended for three gallons of beverage.
4. Level the bed of tea leaves by gently shaking.
5. Slide the funnel into the funnel rails until it stops. On dual dilution models, rotate the funnel handle left or right to align the funnel discharge over the reservoir.
6. The ON/OFF must be ON. Select which batch size to brew.
7. Momentarily press and release the assigned BREW switch. There may be certain situations in which the brew cycle will not begin when BREW is pressed:
 - a. **SWITCH NOT ON** - ON/OFF must be ON.
 - b. **BREW TEMPERATURE TOO LOW** – wait until heated or cancel **BREW LOCKOUT** option.
 - c. **CHECK FUNNEL** – remove funnel, empty previously brewed leaves and replace with fresh tea leaves.
 - d. **DISABLED** - select different brew switch or batch size.
8. If none of the above messages are displayed, the display will read **NOW BREWING** and show the time remaining in the brew cycle.
9. Following the brew will be a countdown of drip time **DRIPPING** which shows the time remaining until the tea no longer drips from the funnel tip.
10. Carefully remove the brew funnel and discard the tea leaves and filter only after visible dripping stops.

COFFEE BREWING (ITCB/HV ONLY)

WITHOUT A SMART FUNNEL AND G9-2T DBC GRINDER:

1. Begin each brew cycle with a clean empty brew funnel.
2. Insert a BUNN filter into the funnel.
3. Pour the fresh coffee into the filter and level the bed of grounds by gently shaking.
4. Slide the funnel into the funnel rails until it stops.
5. Place an empty server under the funnel.
6. The ON/OFF must be ON. Select the FULL batch size.
7. Momentarily press and release the assigned BREW switch. There may be certain situations in which the brew cycle will not begin when BREW is pressed:
 - a. **SWITCH NOT ON** - ON/OFF must be ON.
 - b. **BREW TEMPERATURE TOO LOW** – wait until heated or cancel **BREW LOCKOUT** option.
 - c. **CHECK FUNNEL** – remove funnel, empty previously brewed grounds and replace with fresh.
 - d. **DISABLED** - select different brew switch or batch size.
 - e. **COFFEE FUNNEL?** – appears when brew volume is greater than 86.0 oz. (2.54 L) and pulse brew is disabled. Check to make sure the correct funnel is in place, and then press BREW again.
8. If none of the above messages are displayed, the display will read **NOW BREWING** and show the time remaining in the brew cycle.
9. Following the brew will be a countdown of drip time **DRIPPING** which shows the time remaining until the coffee no longer drips from the funnel tip.
10. Carefully remove the brew funnel and discard the grounds and filter only after visible dripping stops.

WITH A SMART FUNNEL AND G9-2T DBC or MHG GRINDER: (ITCB/HV ONLY)

1. Select the small batch size on the grinder.
2. Insert a BUNN filter into the funnel.
3. Grind the selected amount of fresh coffee into the Smart Funnel using the G9-2T DBC or MHG with Smart Funnel operation and level the grounds by gently shaking.

- Slide the funnel into the funnel rails. The brewer will read the coffee name and size ground through the chip in the funnel handle.

NOTE: The brewer will automatically match the brew batch size to the grinder batch size:

<u>GRINDER</u>	<u>BREWER</u>
Small	Half Batch
Medium	Full Batch
Large	*Full Batch

*If BREW is pressed with a large grinder batch, the display will read: **INCORRECT GRIND...BATCH SIZE WRONG**, and then **PRESS BREW TO BREW ANYWAY**.

- Place an empty server under the funnel.
- The ON/OFF must be ON.
- Momentarily press and release the assigned BREW switch. There may be certain situations in which the brew cycle will not begin when BREW is pressed:
 - SWITCH NOT ON** - ON/OFF must be ON.
 - BREW TEMPERATURE TOO LOW** – wait until heated or cancel **BREW LOCKOUT** option.
 - CHECK FUNNEL** – remove funnel, empty previously brewed grounds and replace with fresh.
 - INCORRECT GRIND** - Indicates a large batch was ground using the grinder. Check batch size and grind weight.
- If none of the above messages are displayed, the display will read **NOW BREWING** and show the time remaining in the brew cycle.
- Following the brew will be a countdown of drip time **DRIPPING** which shows the time remaining until the coffee no longer drips from the funnel tip.
- Carefully remove the brew funnel and discard the grounds and filter only after visible dripping stops.

CLEANING

CAUTION – CLEAN AND SANITIZE YOUR ICED TEA BREWER **DAILY**

- Remove and thoroughly clean the entire brew funnel. The funnel tip and screen must be free from any tea particles or residue. Reassemble the funnel.
- Remove and thoroughly rinse the sprayhead. The holes must be open and clear of any mineral deposits. Wipe the sprayhead panel clean with a damp cloth.

NOTE – Any buildup on the sprayhead may restrict water flow, and impact your brewing. For consistently great tea and coffee, clean sprayhead weekly with sprayhead cleaning tool (#38227.0000). Upon visual inspection it may appear that light passes through all holes in the sprayhead, but a thin film of residue can pass light and still impede water flow.

- Remove sprayhead from brewer.
 - Use the pointed end of sprayhead cleaning tool to remove any mineral deposits from the sprayhead holes.
 - Insert the long end of sprayhead cleaning tool into the sprayhead fitting, and rotate several times to remove any mineral deposits from the fitting.
- The use of a damp cloth rinsed in any mild, nonabrasive, liquid detergent is recommended for cleaning all surfaces on Bunn-O-Matic equipment. Do **NOT** clean this equipment with a water jet device.

CAUTION – DO NOT KEEP BREWED ICED TEA OVERNIGHT. THE SERVER MUST BE CLEANED DAILY.

TANK DRAIN

- Remove front access cover.
- Close the white shutoff clamp on the long hose between tank and inlet solenoid.
- Disconnect the hose clamp and hose from inlet solenoid or check valve.
- Place the end of the drain hose in a container that has a minimum capacity of 2.0 gallons (7.5 L) ITB/ITCB, [3.5Gal/13.25L for HV single or 6.0Gal/22.7L for HV Twin].
- Release the white clamp to drain water from the tank.
- When tank is empty, replace the hose onto solenoid (or flow control) and tighten the black clamp.
NOTE: Do not tighten white clamp!
- Replace the access cover.
- On ITCB units, use care so you do not pinch the dilution hoses when replacing cover.

SANITIZING OPTIONAL SWEETENER

All Models:

1. Remove all the quick disconnects (QCD) from all the B.I.B. containers.
2. Fill a suitable pail or bucket with a warm soapy tap water solution. (140° F)
3. Submerge all disconnects (gas and liquid) in the soapy solution and then clean them using a nylon bristle brush. (Do not use a wire brush). Rinse with clean water.
4. Using a plastic pail, prepare approximately five (5) gallons of Kay-5 (or equivalent) sanitizing solution with at least 100 ppm of available chlorine in 120° F water.
5. Rinse the B.I.B. disconnects (QCD's) in the sanitizing solution.
6. Special sanitizing fittings must be attached to each B.I.B. disconnect (QCD's). If these fittings are not available, the fittings from empty B.I.B. bags can be cut from the bags and used. These fittings open the "disconnect" so the sanitizing solution can be drawn through the disconnect opening.
7. Place all the B.I.B. disconnects (QCD's) into the pail of sanitizing solution.

Models with factory installed sweetener:

8. Press and hold the left hidden switch until the display reads: "SanitizeSweetnr?" Press "YES". Next screen will ask "CONTAINER READY?"
9. Press "YES". Allow solution to flow from dilution nozzle for a few seconds.
10. Press any brew switch to stop. Display will read "SOAKING" and count down from 15 minutes. Display will now read "SOAP PURGE"
11. Remove the special sanitizing fittings, or empty, cut B.I.B fittings from the B.I.B. disconnects (QCD's) and re-connect the QCD fittings to the appropriate B.I.B. container. (You will now begin the process of bringing syrup back through the system)
 - a. Place empty tea dispenser under unit
 - b. Place empty brew basket into funnel rails
12. Press "START". Next screen will ask "CONTAINER READY?"
13. Press "YES". Continue with brew cycle until syrup is flowing freely from the dilution nozzle.
14. Press any brew switch to stop. Display will read "SANITAIION COMPLETE" and return to home screen.

Models with field installed sweetener kit:

8. The next steps are to initiate a brew cycle and draw sanitizer through the system:
 - a. Place empty tea dispenser under unit.
 - b. Place empty brew basket into funnel rails
 - c. Push appropriate brew button for Sweet Tea (brew cycle will initiate)
 - d. Continue with brew cycle until the sanitizing solution is flowing from the dilution nozzle.
 - e. Push the "Enable Brew on/off" button to stop the brew cycle and then push again to cancel the brew cycle
 - f. Allow sanitizer to remain in lines for fifteen (15) minutes.
9. Remove the special sanitizing fittings, or empty, cut B.I.B fittings from the B.I.B. disconnects (QCD's) and re-connect the QCD fittings to the appropriate B.I.B. container. (You will now begin the process of bringing syrup back through the system)
 - a. Place empty tea dispenser under unit
 - b. Place empty brew basket into funnel rails
 - c. Push appropriate brew button for Sweet Tea (brew cycle will initiate)
 - d. Continue with brew cycle until syrup is flowing freely from the dilution nozzle. You may need to repeat steps "a" through "d" until syrup is dispensing from the dilution nozzle.

PROGRAMMING

Using the menu-driven display on the front of the brewer, the operator has the ability to alter or modify various brewing parameters such as brew temperatures, brew volumes, dilution volumes, pulse brew, etc. This allows for the precise brewing of various flavors of tea and coffee.

Programming of the brewer is achieved by entering a certain function. Then, by the use of hidden programming switches and the brew/function switches, the operator can customize the brewing process to their specifications.

PROGRAMMING SWITCHES

To access the programming mode, and to scroll through the different function screens, hidden programming switches are used. There are five of these switches that will be used for the setup of the brewer.

ITB, ITCB-DV & HV

ITCB-TWIN HV

- a) **Right Programming (hidden) switch** (just to the right of the display): This is used to access the programming mode, and is also used to scroll forward through the function list.
- b) **Left Programming (hidden) switch** (just to the left of the display): This is used to scroll backwards through the function list.
- c) **Brew A,B,C (Left Dot, Center Dot, Right Dot - Twins Only)**: Used to select options that appear on the display during programming.

For more advanced **PROGRAMMING** information, refer to programming manual at www.bunn.com

PROGRAMMING

The programming of the brewer is divided into four main categories: Recipes, Calibration, Settings, and Service.

The following function screens are in order of appearance. Each screen will have instructions on how to access and the procedures for programming the various functions of the brewer.

IMPORTANT PROGRAMMING NOTES - READ CAREFULLY -

To exit the programming mode at any time, press and release either ON/OFF pad located on the front switch panel. The display will return to the **MAIN SCREEN**.

If none of the five programming switches are pressed within one minute during the setup of the brewer, the programming of the function screen that is being set will be exited and the display will return to the **MAIN SCREEN**.

Always remember to place a container and funnel under the sprayhead when operating the brewer during the set-up of **CALIBRATE FLOW**, and testing the brew and bypass valves in **SERVICE TOOLS/TEST OUTPUTS**.

MAIN SCREEN

For additional information, you can download the programming manual at www.bunn.com

This screen will be shown when the brewer is ready for use. The screen displays the water temperature in the tank. When the water in the tank reaches the correct set temperature, the display will change from **HEATING** to **READY TO BREW**.

PROGRAMMING LOCKOUT SWITCH is located on the main circuit board.

This switch can be set to prevent access to the programming settings of the brewer. Once all the correct brew settings are programmed, the operator can set the switch to the "ON" position to prohibit anyone from changing the settings. With the switch in the "ON" position, the programming menus can still be accessed to view the current settings. However, no changes will be saved.
